

Media Authentication in the age of AI

—

IRAJ SODAGAR

IBC 2026

Authenticity: The end user view

Source

Where did it come from?

- Who published it?
- Which device or service captured it?
- Who signed the claim?

Composition

How was it made?

- Captured or AI generated?
- Which parts are synthetic?
- Was the AI use disclosed?

History

What happened since?

- Has data changed?
- Which transformations, by whom?
- Which version derives from which?

ADJACENT Rights and authority — who may use, license or distribute it. Same evidence, different discipline.

OUT OF SCOPE “Is it accurate?” Authentication cannot answer it, and conflating the two is what makes this subject feel unanswerable.

Processing

How to get there

Adequate technical solutions

Interoperable formats and metadata

Interoperable interfaces support in the production and delivery workflow

Use of the formats and metadata by various technology vendors

Support in all media players and end-points

Cloud services for backend functions

Regulations and legal requirements

User education
