AOM CODECS BY ATEME

ATEME
Captive your audience

AV1 MARKET ADOPTION

"Today, AV1 accounts for approximately 30% of all Netflix streaming"

"since 2023, almost all devices we have received for certification are AV1-capable"

NETFLIX [Tech Blog](#) - Dec 1, 2025

STREAMING AV1

ATEME & AV1

- > **AV1 Pioneer (2016):** Encoder development, signalization tools
- > **QoE Focus:** Implemented Film Grain Synthesis
- > **Efficiency & Density:** Optimizing VOD & Live delivery
- > **Premium HDR:** Dolby Vision profile 10, Samsung HDR10+ validation
- > **Apple HW validation (2023):** Long-term AV1 strategy affirmed
- > **Renewed HEVC royalty concerns:** Driving AV1 market adoption
- > **Netflix (2026):** Multi-year agreement for TITAN Live deployment

*"Today, AV1 accounts for approximately **30% of all Netflix streaming**"*

*"since 2023, **almost all devices** we have received for certification are AV1-capable"*

A NEW CONTENDER IN THE CODEC ARENA

WHAT'S AV2

A logical successor

- > Same general structure as AV1
- > Same OBU based high level syntax
- > Enhanced partitioning
- > Many many new coding tools!

Andrey Norkin, « AV2 Video Codec Architecture » QoMeX'25

HOW GOOD IS IT?

AV2 Objective performance

- > AOM reported results
 - > 30+% average bitrate reduction
 - > compared to AV1
- > Ateame internal experiments
 - > 18 to 35% bitrate reduction
 - > compared to AV1
 - > Depending on content characteristics

AOM evaluation

Ateame evaluation example
HD football - 25% bitrate reduction

KEY TAKEAWAYS

AV2 is here

- > **30% average bitrate reduction compared to AV1**

- > 18% to 35% bitrate reduction measured on an Ateme test set

- > **Pleasing visual quality at lowest bitrates**

- > Graceful degradation, almost no blocking

- > **Complexity is high (2-3x decoder, 5-10x encoder)**

- > There is a path toward a fast and efficient AV2 encoder

- > Theoretically royalty free

- > Legal issues are still possible

- > MRL, DIP, Parity hiding, ... looking a lot like HEVC/VVC coding tools

WHAT'S NEXT?
