

Big Blue Marble

Engineering the media world — born from ORS Group's broadcast infrastructure and Insys Video Technologies' streaming.

OUR 5G BROADCAST PRODUCT

Carrier-grade end-to-end 5G Broadcast — core, orchestration and Android SDK, Release 14 to 19. Live in 10 European countries.

IBC 2025 → IBC 2026

5G Broadcast — One Year in Review

Rel-19

Standard completed

Two new bands, time-frequency interleaving and CAS muting. Final 3GPP steps by end of 2026 — 5G Broadcast is complete for now.

Plugfest

First 5G-MAG PlugFest in Berlin

9–11 June 2026, Fraunhofer FOKUS. Cores and transmitters from four vendors paired against one shared test plan, Release 14 to 19.

E2E

First Release 19 implementation

Months after the freeze, not years: a commercial-grade end-to-end chain, shown at the PlugFest and now rolling out with TDF in France.

TWO YEARS OF WORK

The Road to Release 19

DRIVEN BY

Roland Beutler · Assunta De Vita · Jordi Gimenez · Ronald Lorenz · Gokul Sani — EBU and BNE, in collaboration with Qualcomm and others

THREE WORK ITEMS

What Release 19 Standardizes

Bands 112 & 113

WHAT

Two new 5G Broadcast bands that split the UHF spectrum.

WHY

Lower UHF for the US, upper UHF for Europe — matching regional TV spectrum plans and device design.

Time-Frequency Interleaving

WHAT

Spreads each service across time and frequency before transmission.

WHY

More robustness, fewer transmitters per area and reliable reception at higher speeds.

CAS Muting

WHAT

Switches off the Cell Acquisition Subframe where it is not needed.

WHY

Mobiles become compatible with DVB-T2 and ATSC 3.0 networks sharing the same spectrum.

9-11 JUNE 2026 · FRAUNHOFER FOKUS

5G-MAG PlugFest, Berlin

- **Four vendors** , one test plan — cores and transmitters from ENENSYS, Nakolos, Rohde & Schwarz and TRedess, paired in every combination.
- **Release 14 to 19** — with a focus on the new features: interleaving, CAS muting, new bands and subcarrier spacings.
- **Confidence for operators** — multi-vendor set-ups proven end to end before anyone signs a rollout contract.
- **Better products for customers** — engineers debugging together in one room is the fastest way to find our own gaps against the spec.

Participants of the first 5G Broadcast PlugFest. Sponsored by Nakolos and Qualcomm.

FROM SPEC TO PRODUCT

First End-to-End Release 19 Implementation

4-5 months from freeze
to a commercial-
grade chain

COMPLETE CHAIN

Encoder → core → transmitter → smartphone,
with every Release 19 feature enabled.

PROVEN IN PUBLIC

Running live at the 5G-MAG PlugFest in multi-
vendor set-ups.

HEADING FOR ROLLOUT

Technology partner to TDF for a large-scale 5G
Broadcast deployment in France.

RELEASE 19, RUNNING AT IBC

See It Live

➤ **NAKOLOS** 5G Broadcast with TRedess — including the world-first 5G Broadcast × Media over QUIC hybrid.
