

Bridging Standards and Deployments

At the intersection of Media and Connectivity, for generations to come

Frédéric Gabin

5G-MAG Chair

**STREAMING – PRODUCTION – BROADCAST – REAL-TIME COMMS – AVATAR – EXTENDED REALITY
5G/6G – NON-TERRESTRIAL NETWORKS – DATA COLLECTION – NETWORK APIs – COMPUTING – AI
CONNECTED DEVICES – VIRTUAL WORLD – VOLUMETRIC VIDEO – CODECS – PROTOCOLS – AUDIO**

Media and Connectivity

-  **Fast tech evolution**
-  **Global ecosystem**
-  **Built better together**
-  **Solution to pain-points**

Connected Devices
Streaming Platforms
Next Generation Codecs
Internet-based Protocols
eXtended Reality
Wireless Video
Real-Time Comms
Data and Analytics
Content Production
Satellite
Network APIs
Artificial Intelligence
Quality of Service
Latency
Energy Consumption
Synchronization
Spatial Media

...

Some examples of our current areas of work

[Bring your topic or project →](#)

Content Delivery and Streaming

5G Media Streaming (5GMS)
Content Delivery Protocols
UE Data Collection, Reporting and
Event Exposure

Point-to-Multipoint Communication

5G Multicast Broadcast Services (MBS)

Connected Media Production

CAMARA Connectivity Quality
Management APIs
Non-Public Networks
Time-Sensitive Communications (TSC)

Real-Time Communications (RTC)

Real-time Media Communication
(RTC) Architecture

Non-Terrestrial Networks (NTN)

Non-Terrestrial Networks in 5G Systems

Immersive Media

Conversational Avatar Communication with
MPEG ARF
MPEG V3C Immersive Platform
XR/3D Scenes with MPEG-I Scene Description
Dynamic Mesh Coding

Towards 6G Media

AI/ML Evaluation Framework
Towards 6G Media
6G AI Traffic Characterization Testbed

Broadcast

DVB-I Services over 5G Systems
5G Broadcast - TV and Radio Services
5G Broadcast - Emergency Alerts

Testbeds & Evaluation Frameworks

Beyond 2D Video Experiences

From requirements to products

SPECIFICATIONS DRIVING
MEDIA + CONNECTIVITY

IMPLEMENTED AND
PUSHED INTO ACTION

Technology & Blueprints

Understand it. Prove its value. Scale it.

Specification analysis for
real-world applications

Making standards
actionable

Lowering the barrier to
entry

Technical Analysis

Understanding how
specifications support
application requirements.

Implementation Blueprints

Turn standards into
implementation-ready
blueprints.

Examples of **Standards Development Organizations (SDO)**

Standardisation Activities

Advancing standardization with implementation and experience-based feedback.

Active engagement with standards bodies

Requirements based on application needs

Identification of bugs and enhancements

Requirements towards SDOs

Requirements towards standards bodies, backed by industry inputs and surveys.

Industry Surveys

Share your input to help shape the requirements 5G-MAG brings to standards bodies.

Feedback to SDOs

Per-SDO feedback tracked on GitHub, and how an issue is carried through to a correction or liaison input.

Liaison Statements & Inputs

Tables of LS sent to and received from SDOs.

Workshops for Standards

The workshops that fed directly into 3GPP study and work items.

Standardisation activities in numbers

Profiles of Standards Specifications

Requirements towards Standards Bodies

Media Connectivity Software Accelerator

Our work at a glance

Early feedback and validation

Software projects & Dev community

No duplication and fast deployment

Open by design and IPR-friendly

Reference Tools

Standards, turned into open code anyone can build on.

Testbeds & Evaluation Frameworks

Reproducible test environments and benchmark frameworks.

Application Showcases

Use-case driven implementations towards real-world applications.

Enabling open-source software from the start of every project

TODAY: OPEN SOURCE AFTER THE FREEZE

WITH OPEN SOURCE FROM THE START

Evaluation

Duplicated prototypes. Each organization builds its own to evaluate a draft; results differ and feedback is slow.

One shared baseline. Drafts are validated against running code before the freeze, while gaps are cheap to fix.

Interoperability

Late interop bugs. Testing starts from scratch at plugfests; errors, some in the specification, surface late.

Faster plugfests. Implementers start from the same code: shorter preparation, faster root-cause analysis.

Deployment

Slow deployment. Years can pass from a frozen specification to production-ready code; early adopters carry the cost alone.

Earlier deployment. End-to-end demos and trials run before commercial products, and feed evidence back into the standard.

5G-MAG
IN PRACTICE

182
issues raised on specifications
through GitHub

35
inputs and liaison statements to SDOs

Reference Tools
And testbeds supporting prototypes,
reference implementations and
technology evaluation

Make open-source software and evaluation platforms work-plan deliverables, not optional extras

Work item launch

Drafting

Freeze and deployment

1

Plan it at launch

Define the open-source software and evaluation platform track from day one: where the code lives, its scope, the evaluation metrics. Reuse existing open platforms.

2

Engage implementers during drafting

Involve open-source communities while the specification is written, and invest in that development. Running code surfaces issues that text review cannot.

3

Make the value tangible

End-to-end demos and benchmark platforms show that the standard works. They lower cost for the whole ecosystem: members and non-members alike, start-ups, academia.

IN ONE LINE, FOR EVERY NEW WORK ITEM

“Open-source software and evaluation platform: home and scope identified at launch.”

A note on the Open-Source Software Licenses

Protecting IPR. Enabling industry collaboration.

What is the License Model?

1. The 5G-MAG Public License v1.0 is a modified version of Apache 2.0 which allows:
 - **Free Non-Commercial Use:** freely use, copy, modify, and distribute the code for non-commercial purposes, including study, academic research, testing, and validation.
 - **Commercial Exploitation:** use the reference tools and software within commercial services, trials, and live deployments, but:
 - **FRAND Patent Licensing:** if used commercially, the built-in patent clause ensures that any essential contributor patents are made available under **FRAND** (Fair, Reasonable, and Non-Discriminatory) terms.
2. Repositories with software derived from other licenses keep their own license according to their own terms.

How to Contribute?

1. Sign an Individual or Corporate Contributor License Agreement (CLA).
2. Anybody can become a contributor (no need to be a 5G-MAG member to contribute code).
3. 5G-MAG members get priority in support from the 5G-MAG Project Office, and additional development resources may be provided. 5G-MAG members define priorities and where to dedicate resources.
4. Membership of 5G-MAG remains open to the industry, to boost and scale your software project by joining forces.

Validation, Interop Plugfests, Demos and Applications

Specifications to code. Code to deployments.

Make value proposition tangible to the industry

Interoperability through early testing and plugfests

Supporting application development and trials

End-to-End Demos and Use Cases

User-facing demonstrations that abstract technical complexity.

Interoperability Events and Plugfests

With shared code, so interop does not start from scratch at plugfests.

Showcase at Industry Events and Trials

Promotion and demonstration of value, not just specs.

Where to meet us

2 recurrent large events and a yearly conference, plus workshops and an open monthly call.

MWC Barcelona

Recurrent large event in Barcelona, with a 5G-MAG stand.

IBC

Recurrent large event in Amsterdam, with Reference Tools demos.

Future Media Townhall

Yearly conference at IBC, co-organized by 5G-MAG and IEEE BTS.

OSCAR Workshop

Open-Source Core, Applications and RAN.

OSMART Workshops

Open-Source Media Application Reference Tools.

Dev Public Call

Open monthly session, no membership needed. Last Friday of the month, 13:00 CET/CEST.

JOIN THE EFFORT

What you get that you won't get alone

We offer a neutral framework to collaborate within minimal bureaucracy, focused on results.

Shape standards early

Shape the standards and technologies before others set them without you.

Early access to pre-public code

Access implementations before publication and be faster to market.

Prepare for plugfests & interop

Test your implementation in advance and build reference vector traces.

Mutualised effort to grow your project

From idea to reference code to demo and trial, on shared effort.

Exposure at events, demos and trials

Build once, together, instead of funding the same work alone.

De-risk on deployments

Back technologies that actually get deployed, not specs that stall.

Our current membership

Membership information and Fee Structure

An association, a platform to collaborate, and a specific reason to be for each part of the media and connectivity chain.

Membership Fee Category LARGE	Annual Revenue > €1 billion	Annual Membership Fee € 15,000
Membership Fee Category MEDIUM	Annual Revenue €100 million – €1 billion	Annual Membership Fee € 10,000
Membership Fee Category SMALL	Annual Revenue €5 million – €100 million	Annual Membership Fee € 5,000
Membership Fee Category MICRO	Annual Revenue < €5 million	Annual Membership Fee € 2,000

Micro also includes universities, regulators, public research bodies, institutions, NGOs, and non-profit organizations.
