XGN Arthur: 5G Broadcast Receiver Software

XGN

XGN ARTHUR

5G Broadcast Receiver Software

Key Features & Capabilities

1

Simple or Advanced Use

- Single binary with no runtime dependencies.
- Receives the complete broadcast with a single click.
- Robust API with live event streams and Prometheus metrics.

2

Broad Transport & Modulation

- Flexible carrier bandwidths ranging from 15 to 40 resource blocks.
- Band 112 & 113 scanning.
- Supports both mixed and dedicated carrier configurations.
- Reduced SCS coming soon.

3

Flexible Content Delivery & Routing

- Delivers content in universally compatible formats for easy playback.
- Re-transmits video onto the network exactly as broadcast.
