DVB-I Services over 5G

DVB-I service discovery combined with 5GMS and 5G Broadcast delivery

3GPP DVB

OCTOBER 2026 – www.5g-mag.com

LEARN

About the project

DVB-I services over 5G Systems rest on three documents

ETSI TS 103 770

Technical Specification

Service discovery and programme metadata for DVB-I, published by DVB as A177: the service list, its service instances and the content guide.

ETSI TR 103 972

Technical Report

Deployment guidelines for DVB-I service delivery over 5G Systems, by the DVB and 5G-MAG Joint Task Force. It records gaps as recommended changes.

DVB C100

Commercial requirements

The commercial requirements for DVB-I over 5G, which the technical report maps into a reference architecture.

LEARN

What 5G adds

DVB-I is a delivery-agnostic service layer; each service instance binds a service to a bearer

More devices

Devices without a tuner

Phones, tablets and vehicles have no DVB-T tuner but do have 5G modems. 5G Broadcast reaches them without the per-user cost of unicast, and the service provider keeps the control DVB-I gives.

Broadcast scale

One copy for everyone

A 5G Broadcast transmission carries one copy of a popular linear channel however many people watch. Unicast cost grows with the audience; broadcast cost does not.

Hybrid services

One service, two bearers

A basic service is distributed over broadcast and augmented by unicast for wider coverage, better quality and experiences broadcast alone cannot provide. The service list holds the two halves together as one service.

LEARN

Three ways to deliver

How the service instance meets 5G, in the deployment guidelines

BROADCAST ONLY

Standalone 5G Broadcast

DVB-DASH content is carried in MBMS User Services, and the selected service instance refers to the MBMS User Service.

UNICAST ONLY

DVB-I over 5GMS

The service instance references a DASH source served through 5G Media Streaming. The DVB-I layer above is unchanged.

BROADCAST AND UNICAST

Concurrent or hybrid

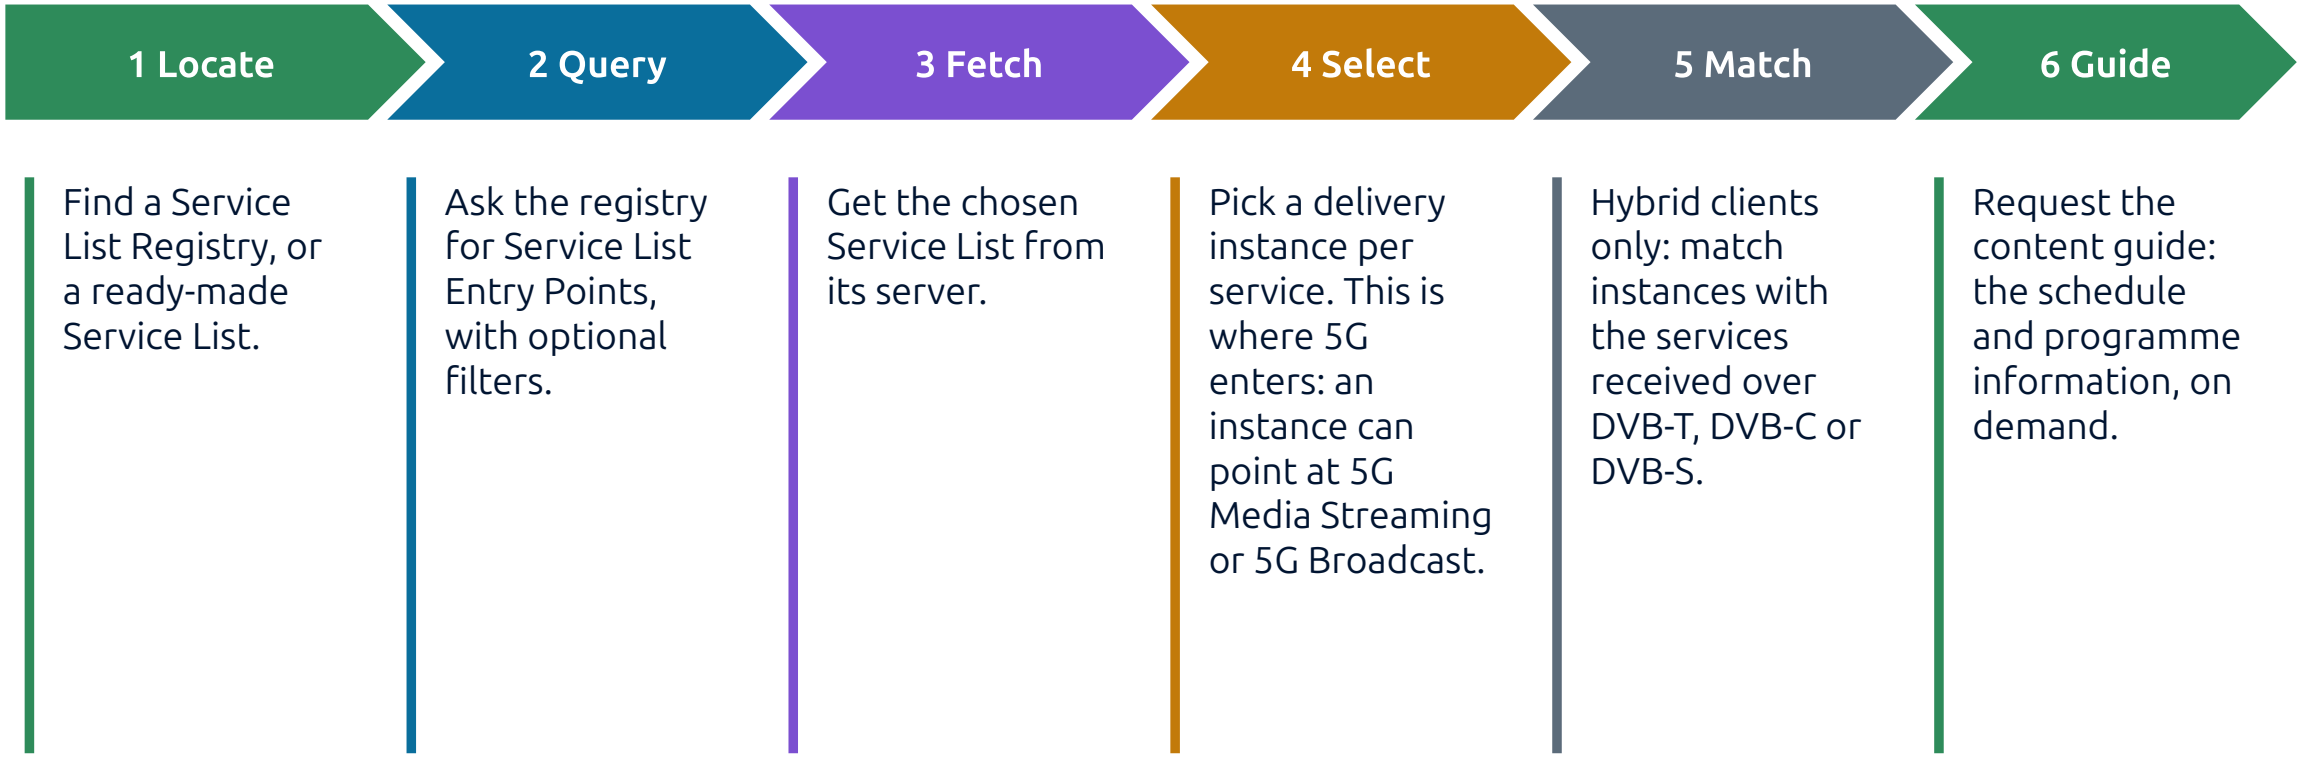

Both a 5G Broadcast instance and a unicast instance are present for the same service; the client selects or switches between them.

The service list holds the delivery options together as one service.

LEARN

How a client finds a service

From a cold start to content guide data

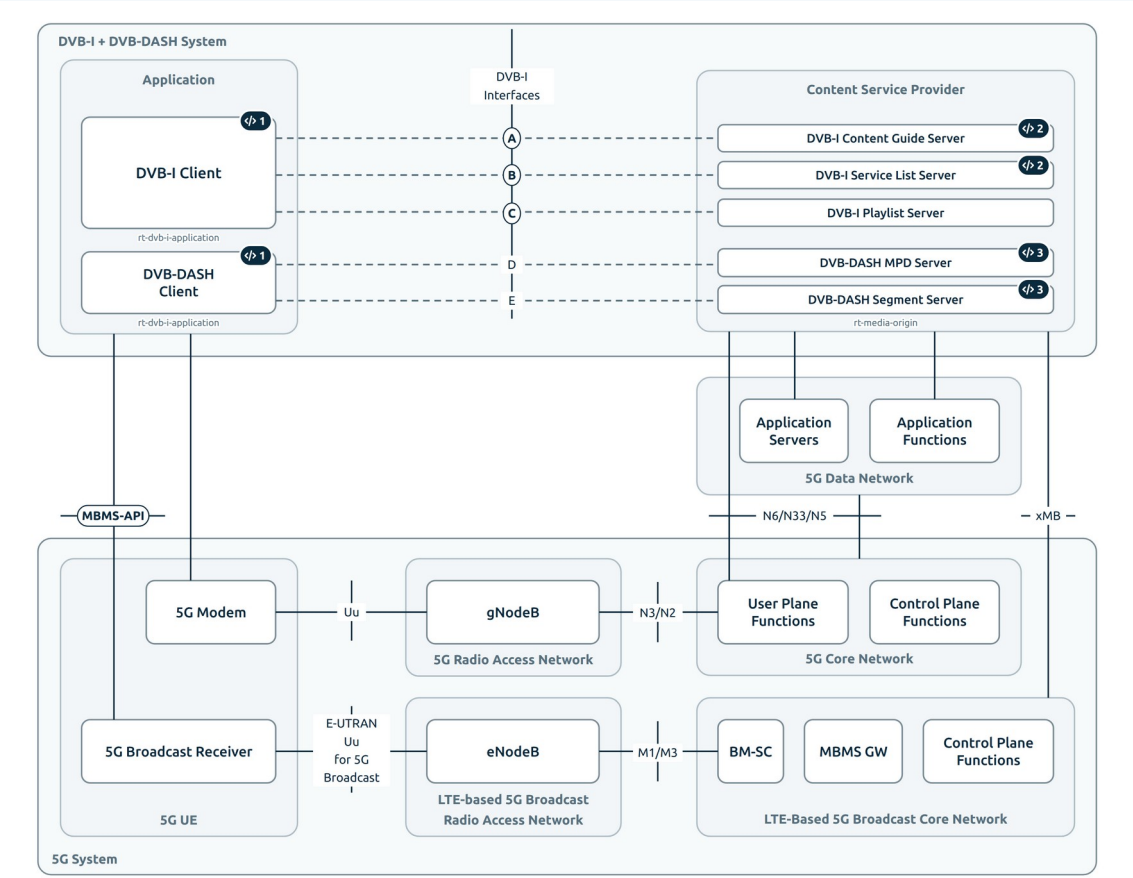

Steps 1 to 3, 5 and 6 are plain DVB-I mechanics, the same over cable, satellite, terrestrial TV or 5G.

LEARN

Architecture

The DVB-I system, and the 5G System it can be delivered over

Boxes without a badge are not mapped to a repository.

IMPLEMENT

Repositories

The DVB-I tools and the application shared with 5GMS, from the descriptions of the repositories

REPOSITORY	WHAT IT IS	COVERS	LATEST RELEASE	
rt-dvb-i-application	Browser DVB-I client that discovers, presents and plays a service list	DVB-I client, Browser	none yet	GitHub
rt-dvb-i-android-application	Native Android DVB-I client, playing with Media3 ExoPlayer	DVB-I client, Android	none yet	GitHub
rt-dvb-i-application-provider	Publishes a DVB-I service list and its content guide, with an editor	Service list, Content guide, Editor	none yet	GitHub
rt-dvb-i-service-list-registry	Answers client queries with a list of Service List Entry Points	Service List Registry	none yet	GitHub
rt-dvb-i-examples	Runnable examples that bring the DVB-I repositories up together	Examples	none yet	GitHub
rt-5gms-application	Test and demo apps for 5GMS, including the Exo DVB-I Player	Exo DVB-I Player, 5GMSd-Aware Application	v1.3.0 26 May 2026	GitHub

CONTRIBUTE

Latest updates and roadmap

Status on 19 October 2026

RELEASED

rt-5gms-application v1.3.0

26 May 2026. A new demonstration interface for 5GMS features, closely aligned with commercial streaming interfaces.

IN DEVELOPMENT

Native Android DVB-I client

A native Android DVB-I client inside the 5GMS-Aware Application, following the DVB-I specification.

PLANNED

Service list acquisition

DVB-I service list acquisition in the 5GMSd-aware application, as in the deployment guidelines.

Reference service list

A DVB-I reference service list that uses 5G Media Streaming, for development and demonstration.
